## SLM Seal Water Flow Meter

Most pumps, agitators, refiners, screens etc. with shaft seals require an uninterrupted sealing water flow to ensure proper function of the seal.

The purpose of seal water is to:

- Cool the seal
- Lubricate the seal
- Prevent the process media from entering the seal chamber

Also the seal condition can be determined by proper monitoring of the seal water flow and pressure.

### Stop pouring money into the drain

Adequate cooling and lubrication are essential for any kind of seal.

However, uncontrolled flow may multiply the necessary water and energy consumption. It is easy to create huge savings in costs by reducing excess water flow with accurate and proper adjustment of seal water flow and pressure.

The Kytola SLM Seal Water Flow Meter is especially designed for applications on pumps and mechanical seals in processes and applications where uninterrupted seal water flow is required.

### Innovative design offers durability and flexibility

The various Kytola seal water flow meter models guarantee compatibility with all seal types. The strong and compact design ensures maximum resistance to external impact.

The SLM has been specially optimized to withstand contaminated water. Reliable and accurate flow measurement is based on a variable area metering principle using a free-floating float. The seal water flow meter can also be easily equipped with an alarm output by utilizing an inductive proximity sensor.

### Easy maintenance reduces down time

The built-in cleaner is designed not to interfere with operation. It effectively removes built-up contaminants.

The long, clear metering scale guarantees visibility and easy inspection of flow level.
